

Instructions – jAnne

Please familiarize yourself with jAnne (code search tool) for which you must have received a 10 minute demo from the research team. Especially, note that jAnne can be used to:

1. Open a set of submissions from a specific folder. (Choose Folder)
2. Search locally inside a specific file for keywords. (Find in file)
3. Search globally i.e., across all submissions for keywords. (Filter Across Files)
4. Save a file after stamping feedback in it. (Save)

The following figure explains the basic functionality of jAnne:
